

Software Project Test Plan

1. Version Control

Revision #	Owner	Author	Reviewed By	Approved By	Changes	Date
1.0	XX	YY	ZZ	AA	Draft	DD-MM-YYYY

2. Project Overview

- Project Name: [Insert Project Name]
- Product/Module: [Insert Product or Module Name]
- Testing Scope: [Briefly describe the scope of testing]
- Timeline: [Start Date] to [End Date]

3. Testing Objectives

- Validate that all functional requirements meet the documented specifications
- Identify defects, gaps, and deviations from expected behavior
- Ensure system stability and functional reliability
- Verify end-to-end user workflows and business processes

4. Scope Definition

In Scope

- Core business functions
- User workflows and transactions
- Data validation
- System integration
- Error handling & edge cases

Out of Scope

- Performance testing
- Security testing
- Infra setup
- Third party tool validation

5. Testing Strategy

- Test Levels: Unit Testing, Integration Testing, System Testing, User Acceptance Testing (UAT)
- Test Approach: Black-box functional testing
- Test Environment: [Development/Staging/QA]
- Tools: [Insert Tools]
- Entry: What must be ready before testing begins? (e.g., Code complete, environment stable).
- Exit: What conditions must be met to conclude testing? (e.g., All planned tests executed, success criteria met).

6. Test Coverage Matrix

Feature/Module, Priority, TC Count, Execution Status (Can be separate tool / spreadsheet)

7. Resource Requirements

- QA Engineers: [Number of testers required]
- Test Environment: [Environment details and configurations]
- Tools: [e.g., Jira, TestRail, Postman, Selenium]
- Test Data: [Required test data, datasets, user accounts, sample inputs]

8. Deliverables

- Test plan and test strategy document
- Test case and test scenario specifications
- Defect reports and tracking logs
- Test execution reports and summary
- Final Release Documentation

9. Risks and Mitigation

- Risk: Test environment instability. Mitigation: Dedicated DevOps support during the execution phase.
- Risk: Unavailability of third-party APIs for integration testing. Mitigation: Use mock services or stubs.

10. Success Criteria

- At least 95% of planned test cases executed and passed
- All critical and high-severity defects are resolved
- No critical or blocker defects remain open at release time
- Automation coverage is 100% and enabled in CI
- Business stakeholders complete approval and UAT sign-off

11. Timeline and Milestones

- Test Planning: [Date]
- Test Case Design: [Date]
- Test Execution: [Date]
- Defect Resolution: [Date]
- UAT Phase: [Date]
- Release Readiness: [Date]

12. Approval

- QA Lead/Manager: _____ Date: _____
- Project Manager: _____ Date: _____
- Stakeholder: _____ Date: _____
